camQUIX

® CAM-system for all profile machining centers

camQuix® a modern CAM software for profile processing

camQuix®

enables a direct control and process optimization of all CNC machines in your workshop. Our CAM supports you by importing, editing and optimizing your production data with a clear user interface.

camQuix®

is the top level CAM system in modern machining control software

camQuix® supports you with:

- camQuix® Import filters for all important construction data
- camQuix® Creating parameterizable template programs
- camQuix® Machine-independent programming in one CAM
- camQuix® Flexible adaption to your production process

camQuix®

individual interfaces and post-processor

Data Import

camQuix® has been developed for the metal construction industry and supports the interfaces of all common construction and calculation systems.

Interfaces - from custom-made to serial production - with the ability to import, for example from Excel-files, data bases, macro databases, DXF-drawing or any kind of self-created text files.

During the last 12 years, we have implemented more than 100 different import variants. If the imported data contains all geometric definitions, optionally supported by your macro database, the data-flow can proceed fully automatically, without any action from the operator.

Post-Processor

To use the complete functionality of all your machines, we always have attached importance to a flexible data output. By using our powerful postprocessor module, we can translate your CAM data into all different kinds of machine codes. This can be pure ISO code or other data interfaces. Bar centers, pushing centers and routers are also supported.

Our post processors are tested on-site directly on the target machine to guarantee the best possible optimization and processing sequence during production use.

camQuix® Service Contract

Free Updates

Free updates are a core piece of our service contract. Stay technically up to date - and benefit from the latest software improvements and newly implemented function.

Comprehensive Support

You get support for your product via e-mail, telephone & TeamViewer remote support. Our technical division looks on your screen and helps instantly.

Training & Consulting

We train you in using our software and test the installation for functionality with customer specific parts and real tasks. We further adjust the master data such as tools and brief you in handling all options.

camQuix® Product Service

fair second license prices

on site machine integration

interfaces to calculation and construction software

on-site training

control of label printers

integration of barcode reader

6 months free support from date of purchase

Individual post-processor

Get more !

Increase your productivity with a high-quality programming system containing the intelligence and performance of 20 year' experience in the direct control of machining center. camQuix® it the top level CAM-system in modern machining control software
